EDUCATION

Brooklyn College

Bachelor of Science in Computer Science

Brooklyn, NY

Aug. 2021 – May 2025

EXPERIENCE

Computer Science Tutor

Sep. 2025 – Present

Brooklyn College

Brooklyn, NY

- Elevated students' understanding of Java concepts through targeted tutoring sessions focused on algorithmic thinking rather than rote syntax memorization.

Computer Science Teaching Assistant

Aug. 2024 – May 2025

Brooklyn College

Brooklyn, NY

- Guided 60+ undergraduates across two Java courses by delivering hands-on technical assistance during labs and leading study sessions that improved student performance.
- Advised students on responsible LLM usage, emphasizing critical evaluation of model outputs and independent reasoning to ensure AI functioned as a tool, not a crutch.
- Earned 99% positive end-of-semester evaluations from students during end of semester surveys.

Peer Mentor

Aug. 2024 – May 2025

Brooklyn College

Brooklyn, NY

- Mentored a cohort of STEM students, promoting their mental, social, and academic well-being as part of a university-wide initiative to improve graduation rates.

Software Engineering Intern

Jan. 2023 – Jan. 2023

Barclays

Whippany, NJ

- Engineered a JavaScript static analysis algorithm integrated directly into Barclays' proprietary code editor to automatically detect erroneous function calls across the codebase.
- Reduced developer debugging overhead by automating syntax validation, eliminating a manual bottleneck and reallocating engineering bandwidth to higher-priority tasks.
- Collaborated with a 4-person intern team to deliver a production-ready editor enhancement on time within a strict one-month deadline, leveraging agile sprints and daily standups to surface blockers and align stakeholders.
- Presented a polished technical deep-dive on the tool's architecture, implementation, and scalability to a live audience of Barclays engineers.

PROJECTS

Discord Bot | *Docker, Flask, Pandas, Pytest, Python*

Dec. 2025 – Mar. 2026

- Built and deployed a publicly installable Discord bot to the Render cloud platform that serves an active community with real-time Pokémon data—stats, abilities, types, moves, and items—via an intuitive command interface.
- Ensured query accuracy by validating inputs against Pandas dataframes before issuing PokeAPI calls, and implemented fuzzy string matching to gracefully handle misspelled or approximate Pokémon names.
- Extended the bot with commands for shiny and non-shiny sprite retrieval, random Pokémon selection, server moderation utilities, and multi-language support configurable via a single constants variable.

Timesheet Command Line Tool | *PyPDF, Python, SQL, SQLite, Unittest*

Nov. 2025 – Mar. 2026

- Automated generation of Brooklyn College part-time worker timesheets from user input, producing print-ready, signable PDFs and eliminating a previously manual process.
- Implemented automatic pay period detection and missed-day tracking, reading per-employee schedules from a JSON configuration file to produce correctly pre-filled timesheets without manual date lookups.
- Built a full C.R.U.D. interface allowing users to manage pay period records and scheduling data without writing SQL, and wrote a test suite covering core database operations and class behavior.

TECHNICAL SKILLS

Languages: C, C++, Java, JavaScript, TypeScript, Python, SQL

Libraries: NumPy, Pandas, React.js

Frameworks: Flask, Pytest

Tools: Microsoft Office, Docker, Git, Google Suite, MongoDB, SQLite
